

# Less Admin, More Science: Saros Therapeutics Simplifies Procurement Operations

## Company Snapshot

Saros Therapeutics is a Chicago-based biotechnology company focused on developing and commercializing novel immunotherapies to improve and extend the lives of cancer patients.

## The Challenge

Like many small biotech teams, Saros Therapeutics juggled procurement alongside a range of other responsibilities.

With scientists wearing multiple hats, managing orders, tracking shipments, and handling approvals often fell outside their core scientific work. Procurement relied on spreadsheets and email threads, while finance lacked the visibility needed to stay ahead of spend.

“

With a small team and limited bandwidth, our manual purchasing process made it time-consuming to place routine orders. **We didn't know better until we discovered Prendio.**

”

Oana Truica, Principal Scientist, Saros Therapeutics

## The Solution

After a live demonstration and undergoing the onboarding process including dedicated training, Saros was able to get up and running within a week. The intuitive all-in-one platform enabled streamlined ordering, punchouts, integrated approvals, and QuickBooks syncing.

## The Impact

**Procurement from 2 hours to 2 minutes:**  
Scientists regained valuable lab time

**Real-time visibility into spend** supporting faster, data-driven decision-making

“

I can place an order in under two minutes. The **punchouts are game-changing**. I don't waste time jumping between vendor websites or wondering if something shipped. Prendio gives me peace of mind that everything is tracked and reported accurately. We're a small team, and **I used to think we were too small for something like this. But our time is so valuable that it makes it even more worthwhile.**

Oana Truica, Principal Scientist, Saros Therapeutics
